

## S1-SERIES

S1

S1-2

S1-S

S1-P

### S1 Series – Technical Specification

S1	<p><b>A single roller separator</b> can fit to the end of any Crizaf conveyor to separate sprues from parts. The smaller items fall vertically between the conveyor belt and the roller, and the longer or larger components carry over the roller and are discharged into a separate container or granulator</p>
S1-2	<p><b>A double roller separator</b> for separating sprues and parts. The S1/2 has the ability for three-way separation, and can be fitted to the end of any Crizaf conveyor.</p>
S1-S	<p><b>A spiral roller separator</b> for more complicated separation applications. Components pass under the spiral roller, while the sprues are carried along the spiral roller and discharged to the side, into a separate container or granulator.</p>
S1-P	<p><b>A paddle separator</b> can be fitted to any Crizaf swan necked conveyor. Smaller components pass under the rotating paddle, while the larger components or sprues are discharged to the side, into a separate container or granulator.</p>
