

COLLECTING FUNNEL ATB-L

The collecting funnel ATB-L with lamellas is mounted under the tool of an injection moulding machine via strong permanent magnets. It safely catches the moulded parts after demoulding and passes them onto a conveyor belt or into a container below the machine. The funnel is moveable and follows the tool. Cooling or tempering hoses can be passed through the lamellas easily, without new complex placement of the hoses.

PRODUCT FEATURES

- Aluminium profiles as holder
- Attached to the mould tool, the clamping plates or in the machine bed
- Cooling or tempering hoses can easily be passed through the lamellas
- PVC material in two different colours (silver & blue)
