

COLLECTING FUNNEL ATF-L

The ATF-L collecting funnel has a fixed frame and is mounted in the bed of an injection moulding machine via strong permanent magnets. The strip fingered side walls mean that cooling or tempering hoses can pass through the funnel, negating the need to re-route them. It safely catches the moulded parts after demoulding and directs them onto a conveyor belt or into a container below the machine.

PRODUCT FEATURES

- Fixed frame of aluminium profiles
- Attached in the machine bed
- Cooling or tempering hoses can easily be passed through the lamellas
- Options: spacers or brackets
- PVC material in two different colours (silver and blue)
