

## COLLECTING FUNNEL ATB-S90 DIAGONAL

The collecting funnel ATB-S90 with diagonal runout chute, position 90° under the tool of the injection moulding machine via strong permanent magnets, in the direction of the moulding machine. It safely collects the moulded parts after demoulding and transfers them onto a conveyor belt or into a container below the machine. The fabric funnel flexes to move with the tool. Optional attachments such as soft drop baffle and/or removable base ensure damage-free collection and waste reduction of the moulded parts.

### PRODUCT FEATURES

- Aluminium profiles as holder
- Attached to the tool, the clamping plates or in the machine bed
- Diagonal run-out chute, turned 90° for transferring moulded parts onto a conveyor belt or into a container below the machine
- Optional: baffle, removable base
- Different materials are available depending on the application
