

COLLECTING FUNNEL ATF

The collecting funnel ATF with straight runout is mounted in the machine bed of an injection moulding machine via strong permanent magnets. It safely collects the moulded parts after demoulding and transfers them onto a conveyor belt or into a container below the machine. The funnel has a fixed frame. Optional equipment such as soft drop bafflers or mounting via brackets ensures damage-free collection and waste reduction of the moulded parts.

PRODUCT FEATURES

- Fixed frame of aluminium profiles
- Attached in the machine bed
- Straight run-out chute for transferring moulded parts onto a conveyor belt or into a container below the tool or the machine
- Options: soft drop baffle(s), brackets
- Different materials are available depending on the application
